EDUCATION

University of South Florida

Expected May 2028

Master of Science in Computer Science

University of South Florida

May 2026

Bachelor of Science in Computer Science

GPA: 3.52/4.00

Relevant Coursework: Data Structures and Algorithms (C), Operating Systems (C), Database Design (PostgreSQL), Computer Networks I (C), Big Data with Apache Hadoop (Java), Computer Architecture, Probability and Statistics, Network Analysis and Machine Learning (Python), Social Media Mining (Python), Software System Development (C#)

SKILLS

Programming Languages: JavaScript, TypeScript, HTML5, CSS3, Python, C/C++, C#, Java, SQL

Technologies & Tools: React.js, Node.js, REST APIs, DOM, Jest, Unit & Integration Testing, Git, GitHub Actions (CI/CD), Docker, Firebase, PostgreSQL, Unix/Linux CLI, Agile/Scrum

Certificates: Foundations of User Experience (UX) Design – Google, CCNAv7: Introduction to Networks - Cisco Networking Academy (Credly Badge)

Languages: English (fluent), Portuguese (fluent), Italian (beginner), Spanish (beginner)

PROFESSIONAL EXPERIENCE

Research Assistant Developer, *University of South Florida*, Tampa, FL

March 2026 – Present

- Designed and **built** a responsive end-to-end **full-stack** web platform for cognitive research using **React** and **Firebase** by aligning with stakeholders to define requirements and applying **UX** best practices for individuals with disabilities.
- Developed a reaction time recording system synchronized with musical theme onset and offset timestamps, enabling accurate behavioral data collection for cognitive research.
- Deployed two independent study conditions to Firebase Hosting via a GitHub Actions **CI/CD** pipeline, enabling separate branches for controlled experimental conditions.

Software Engineer Intern, *TELUS Digital*, Durham, NC, USA

June 2025 – August 2025

- Independently learned TinyMCE's plugin architecture to implement resizable PDF embeds within a rich-text editor, quickly ramping up on an unfamiliar framework to meet a deadline.
- Resolved stepper state logic bug in a multi-stage job application workflow by **replacing** step categorization from name-based grouping to index-based tracking, ensuring accurate progress indicators across dynamic exam steps, covered by unit tests.
- Debugged client-side production errors reported in Sentry logs and browser developer tools by collaborating with a **cross-functional** engineering team to reproduce failures across multiple environments, restoring platform stability.

Software Engineer Intern, *TELUS Digital*, São Paulo, Brazil

June 2024 – August 2024

- Built and shipped a full-stack **feature** end-to-end for a chatbot platform to manage conversation data, **integrating** a React **frontend** with a **REST API** endpoint and database logic, improving automated test efficiency by 8+ hours.
- Executed a **database migration** to remove orphaned records and resolve data inconsistencies in a **large-scale** relational schema, improving data integrity and reducing query latency.
- Developed using **TypeScript**, **TypeORM**, **React**, and **Jest**, writing and maintaining unit and integration tests to ensure reliable, production-ready code.

VOLUNTEER EXPERIENCE

Tech Development Analyst, *Brazilian Student Association*, USA (remote)

May 2023 – August 2024

- Co-led **development** of a **web application** for Brasa Conferences attended by approximately **1900+** participants and employers in all 3 BRASA events.
- Built a workshop registration feature in **React** and **TypeScript**, enabling participants to browse, register for, and cancel sessions independently, eliminating manual registration handling by organizers.
